Customer User Stories

As a visitor to Pesky Pooch, I should be able to _ so that I can _.

As a visitor to Pesky Pooch, I should be able to browse all information relevant to the brand so that I can decide whether I would like to purchase services or not.

As a visitor to Pesky Pooch, I should be first greeted by a home page that clearly outlines the purpose of the brand/website, and directs me to the more specific areas of the website, so that I can first ensure I am on the right website, and to facilitate business.

As a visitor to Pesky Pooch, I should be able to easily access the other social media/content streams related to the brand so that I can find more information about the brand and those who run it.

As a visitor to Pesky Pooch, I should ALWAYS be able to easily access a method of contacting the brand, so that if I wish to purchase any services I am efficiently able to do so.

As a particularly locally focused business, a large amount of the traffic to the website will be mobile, and as such the user experience of Pesky Pooch should be oriented around mobile use.

Administrator User Stories

As an administrator of Pesky Pooch, I should be able to access an administrator dashboard which displays all received contact forms and allows for the removal of entries so that the database can be kept slim and relevant.

Operator User Stories

As an operator of Pesky Pooch, I should be able to update all dynamic content as required.

As an operator of Pesky Pooch, I should need to be authorized so that I can ensure the safety and security of access to the website's control features.

As an operator of Pesky Pooch, I should be able to access a control dashboard that lists all received contact forms, and allows for their removal, so that the relevance of information on this dashboard is relevant to present business. As an extra feature, these could feature a 'seen' value so that once seen, they are retained but are no longer visible.

Back End Production Tasks

Initialize back end using npm, install necessary packages

Set up a MongoDB Atlas Cluster / Configure

Set up back end server with Node.js and Express

Define a mongoose schema for both Users (not required in front end) and Requests

Set up two API routes: login, and new request, using passport + jsonwebtokens for authentication.

Write unit tests

Test API routes using Postman

Unassigned Tasks - LOW PRIORITY

Once 'Part-A' is complete, wipe all docs related info from trello board and set the boards focus 100% onto build related info. Or create a seperate, new board for the build.

Unassigned Tasks - MEDIUM PRIORITY

Unassigned Tasks - HIGH PRIORITY

Group Tasks - TODO
