

Client renders
/admin/login

User completes sign-
in form, partially
validated by HTML
email field, and
submits it, which
posts it to the server
with axios

Server validates form content
and uses user model to
retrieve user if it exists

If successful, user is
returned to the client
and logged in

Client redirects to root
page

If unsuccessful,
failure message and
relevant errors are
returned to the client
and rendered
